R-11 THE ANTI-SKID SURFACE

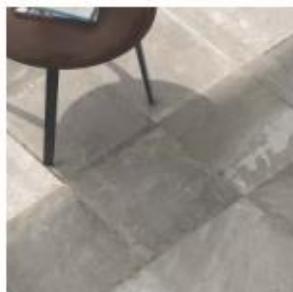

R-11, the Anti-skid surface is the result of increasing demand of porcelain tile for the high-performance environment due to its popularity in various uses and applications. Main candidates for R-11 surface are wet areas that are exposed to moisture and water, outdoor floorings, frequently used floors and high-traffic areas. This finish has an amazing ability to roughen the tile surface without changing its design; so that you can have a cohesive visual feel of the same design having multiple finishes throughout the spaces.

INSTALLATION SYSTEMS

Outdoor floors can be laid in many ways to give a space a stylized look. It can be dry laid on the grass by leaving a little space between all tiles with grass peeking from it. Another outdoor space where you can lay tiles is on the gravel by leveling the space and laying tiles and applying some pressure with a rubber hammer to fix it in place.

Outdoor tiles can also be laid on raised flooring to allow proper drainage, insulation or to conceal cables and pipes, giving a space a neat and pristine look. The tiles can be fixed using adjustable support. Then, there is always the classic method of laying tiles on screed with adhesive for great durability. This method is mainly used in areas like garages and car parks of residential as well as commercial spaces. This laying technique creates uniformity between tiles and the road.
